

FEATURES:

- high speed steel cutting blade
- comfortably shaped ash handle
- brass plated ferrule and bumper tip
- unique square shaped shank keeps the tool at the correct 45° angle for shear scraping and eliminates dig-in
- produces the best possible slicing (shearing) cut
- safer than cutting with conventional flat scrapers
- cutters are ground at 60° and should be sharpened only on the top face with either a fine diamond file or oilstone - this will retain the original shape and will ensure that only a few microns of metal are removed at each sharpening
- the round shape of this cutter is ideal for scraping concave profiles (like the inside of bowls)
- allen key included for removal of cutting blade

APPLICATION:

The unique design of this tool produces the best and safest shearing cut. Use for scraping concave turnings.

SPECIFICATIONS:

Blade Length	Handle Length
$6\frac{5}{8}"$	12"
