1. The High Chair Safety Strap consists of a 15" long Crotch Strap with a slip-lock buckle and an adjustable loop at one end, as well as two 20" sections of Waist Strap that connect with a side-squeeze security buckle. The Waist Strap passes through the adjustable loop in the Crotch Strap.

2. Determine where the Crotch Strap and Waist Strap sections will be attached to the high chair. The Crotch Strap should be centered at the front of the seat. (The straps can be trimmed, if necessary.)

3. At each mounting location, fold the end of the strap over once or twice (Fig. 1), then drive a screw through the folded material to secure it to the chair. For best results, use a washer-head screw or a wood screw with a finish washer (not included) to secure the straps. Be sure that the screw is the proper length for the chair stock thickness.

4. Once all straps are mounted, feed one of the sections of the Waist Strap through the loop in the Crotch Strap and buckle to the other section. Use buckles to adjust strap lengths as necessary.
