1. Drill 14mm (17/32" or 9/16") diameter holes 3/8" deep in cabinet front for socket.
2. Tap socket into place.
3. Locate matching position for connectors on back side of speaker cover or panel. Screw into place with #3 or #4 flat-head screws (not included); use length appropriate to thickness of speaker cover.
4. Snap speaker cover into place on cabinet. Pull to remove. **Note:** Gap between speaker cover and cabinet can be reduced if desired by mortising connector plate and/or socket rim. For inset speaker covers, attach a small pull tab (not included) to ease removal.
