- can be used on small built up lids or 3/4" flat lids
- each pkg contains 2 catches and screws

## APPLICATION:

A pull down catch for securing lids of boxes made of wood, metal or plastic.

## SPECIFICATIONS:

## INSTALLATION:

**INTRODUCTION:** Determine the number of catches needed for installation. One (1) catch is needed on smaller boxes while two (2) catches are necessary on larger boxes. On larger boxes two (2) catches can be placed near outer ends with a surface lock placed in the center of box.

1. Assemble top and bottom sections of catch together.
2. Place catch in front of box and mark mounting holes with pencil.
3. Drill pilot holes in wood for mounting catches on a wooden box and then attach with wood screws provided. If box and material thickness is less than 1/2", it is suggested to use # 6 pan head screws of the appropriate length.
