

**Description:**

CastFX Dry Metallic Color Pigments are powders that can be added directly to RiverCast, MirrorCast and MirrorCoat. These pigments add a stunning pearlescent effect to our epoxy resins. CastFX Dry Metallic Color Pigments can be intermixed with one another to create your own unique color blend.

CastFX dry color pigments and CastFX Liquid Colorants can be used together to create stunning, one of a kind effects.

**Features:**

- Stirs in easily
- Economical, a little goes a long way
- Produces shimmering, iridescent effects
- Compatible with epoxy, waterborne and solvent based coatings\*

\*Pre-test to ensure the results meet your expectations

**General Information:**

CastFX Dry Metallic Color Pigments are compatible with most coating systems. We recommend testing beforehand to ensure the results meet your expectations.

**Measuring And Mixing:**

Combine the Resin (Part A) with the Hardener (Part B) at the appropriate ratio. Mix thoroughly according to the RiverCast, MirrorCast or MirrorCoat product specifications. Then add CastFX Dry Metallic Color Pigments and mix until uniformly blended with the casting resin.

**Application:**

Consult the RiverCast / MirrorCast Application Guides available at [www.systemthree.com](http://www.systemthree.com) for detailed instructions.

**Cleanup:**

Wash hand and other surfaces with warm, soapy water.
