

Tip-Out Tray System Installation Instructions

Tools Required:

#2 Phillips Screw Driver

Optional Drill and 3/32" Drill Bit

Self-Holdin' Hinge Installation:

Step 1 - Remove front panel or panels from sink cabinet.

Step 2 - Install the hinges to both sides of the cabinet as shown in Figure A. Locate the front edge of the hinges flush with the out side of the cabinet and install the flat head screws provided in the approximate middle of the elongated holes. This will allow for a future "up & down" adjustment of 3/16 inch.

Step 3 - Mark the back of the panel with the cabinet opening less the 11/16 inch, distances shown in Figure B. Both marks should be equal from the sides.

Step 4 - Measure the height of the elongated slots using the original panel position as your reference point Mark the panel. Install the panel to the hinges using the Truss Head Screws provided.

Euro Hinge Installation:

Step 1 - Remove front panel or panels from sink cabinet.

Step 2 - Install the hinges to both sides of the cabinet as shown in Figure A. -Locate the front edge of the hinges flush with the out side of the cabinet and install the flat head screws provided in the approximate middle of the elongated holes. This will allow for a future "up & down" adjustment of 3/16 inch.

Step 3 - Mark the back of the panel with the cabinet opening less the 3/8 inch, distances shown in Figure B. Both marks should be equal from the sides.

Step 4 - Measure the height of the elongated slots using the original panel position as your reference point Mark the panel. Install the panel to the hinges using the Truss Head Screws provided.

POLYMER TRAY (STANDARD & ACCESSORY), STAINLESS, AND SLIM SERIES TRAY INSTALLATION:

(63131)

(84369)

Tools Required:

#2 Phillips Screw Driver

Optional Drill and 3/32" Drill Bit

Step 5- Close the panel, reach inside the cabinet and draw a line across the top of the frame opening on the back of the panel. Open the hinged panel and draw another line 1/8 inch below the top of the frame line. This new line is your gaging line for the top of the Tip-Out Tray.

Step 6- Place the top of the tray against your gaging line, centered between the hinges, and mark the center of the top portion of the mounting holes. Apply the screws of sufficient depth to allow removal of tray for future cleaning.

Note: In most cases it is easier to remove the panel from the hinges for tray installation, reinstall and adjust the panel and then slip the tray on the screws.

Helpful Hints

- A small amount of bar soap on the screw threads will reduce the initial installation effort.
- Pre-installation of the screws or pre threading into holes will also ease final installation.
- Your new trays are made from a Hi-Impact Polymer and may be cleaned using mild soap and water. Avoid scalding water, harsh abrasives and dishwashers.

SLIM SERIES TRAY INSTALLATION:

Step 5- Close the panel, reach inside the cabinet and draw a line across the top of the frame opening on the back of the panel. Open the hinged panel and draw another line 1/8 inch below the top of the

frame line. This new line is your gaging line for the top of the Tip-Out Tray.

Step 6- Place the top of the tray against your gaging line, centered between the hinges, and mark the center of the top portion of the mounting holes. Apply the screws of sufficient depth to allow removal of tray for future cleaning.

Note: In most cases it is easier to remove the panel from the hinges for tray installation, reinstall and adjust the panel and then slip the tray on the screws.

Helpful Hints

- A small amount of bar soap on the screw threads will reduce the initial installation effort.
- Pre-installation of the screws or pre threading into holes will also ease final installation.
- Your new trays are made from a Hi-Impact Polymer and may be cleaned using mild soap and water. Avoid scalding water, harsh abrasives and dishwashers.

CUSTOM POLYMER TRAY INSTALLATION:

(63149)
(84351)

Tools Required:

#2 Phillips Screw Driver
Optional Drill and 3/32" Drill Bit
Fine Tooth Saw
Block of Wood

For Hinge installation see Steps 1 thru 4 for Self Holdin' or Euro hinges and Figures A & B.

Figure C.

Tray Assembly and Installation:

Step 7- The 36" tray in most applications will have to be cut to the proper length. To obtain proper length, measure the opening width, then subtract 1-1/2" from the opening width and cut tray accordingly.

A fine tooth saw is recommended for best results, along with a block of wood immediately adjacent to cut off point for support as shown in Figure C. Remove any burr from tray ends.

Step 8- With adhesive provided (please read warnings and directions on adhesive tube), apply all the way around the inside of the end cap channels, which should sufficiently hold the end caps in place.

Step 9 - After adhesive has set, locate tabs on end caps as shown in figure D, mark panel, drill and mount screws to sufficient depth to allow removal of the tray for future cleaning.

WARNING: If tray is to be shipped installed in cabinet "Tape securely to panel."

Figure D

Refer to preceding note and helpful hints for easier installation.
